I have a line in the code, which looks like this Dim Model = "myvalue" I'm looking to change this to Dim Model as String = "myvalue" The Model variable contains some text. When I try to run the line of code, I get an error saying Invalid expression term'myvalue' Can anybody help me out? A: You can use this instead: Dim Model as String = "myvalue" or Dim Model As String = "myvalue" VB.Net does not have a constant type, it is always string. If you need to compile a.NET 2.0 application, use: Dim Model As String = ""myvalue"" or Dim Model As String = """"myvalue"""" and not "myvalue". A: Make it a string, not a constant: Dim Model as String = "myvalue" You can then use it as af5dca3d97
